## COVENTBRIDGE GROUP TRUTHIQ SUITE

### Nano

Our TruthIQ Nano investigation is a comprehensive search of a claimant's background and online databases. This investigation dates back prior to loss and is conducted by a licensed investigator. At this level we will provide you with the subject's identifiers and aliases through national online database research, inclusive of; social media analytics, detailed internet research, database reported assets and liabilities, potential employers & businesses, residential history, utility services, motor vehicle information, property ownership and surveillance assessment.

Results will be provided in a report containing investigative analysis of impact and potential red flags.

#### Micro

Our TruthIQ Micro investigation not only includes the same effective mining techniques and databases of our Nano offering, but it introduces 30-days of monitoring, providing valuable insights into red flags on a more continual basis. This monitoring ensures the capture of the claimant's long-term changes in activity/restrictions which can strategically guide surveillance efforts.

Additionally, this offering includes traffic violations, arrests and criminal information obtained through databases.

Mega

Our TruthIQ Mega investigation combines all the investigative methods of our Nano and Micro offering but monitors the claimant for a full 60-days, providing their digital footprint over an even longer period. In this offering, criminal records are searched through state and/or local law enforcement and is inclusive of up to 3 civil searches.

This investigation also takes a more in-depth approach when researching businesses records and licensure, uncovering any disciplinary actions related to licensing, potential lawsuits of interest, and potential employment/other sources of income. This can prove invaluable if the business involves manual labor activity that would contradict claim restrictions.

#### Giga

Our TruthIQ Giga investigation offering includes all the previous stated levels of investigation with an additional emphasis on vehicle investigations. With the Giga offering you will also receive vehicle recognition data. This data will be obtained through vehicle searches by plate/VIN, address searches and vehicle photo searches. A live vehicle alert will also be set, which will provide vehicle location information in real-time to aid in investigation efforts.
